

safe and secure

SLIMLINE SENSOR

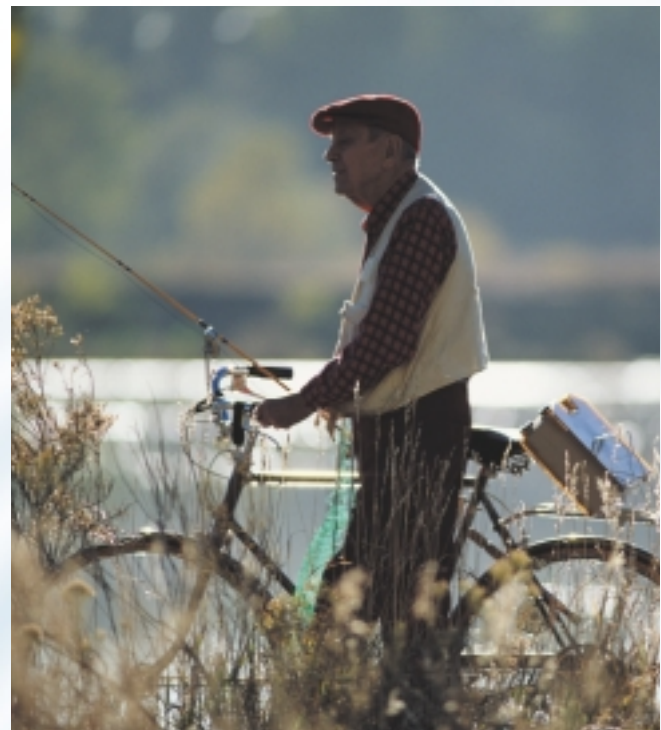

HKC's Quickfit Slimline Sensor represents the most advanced protection in sensor security. All vulnerable openings (ie windows and doors) are fitted with a sensor unit which is monitored electronically at the control equipment. In the event of an attempted break-in, the unit is designed to activate **before** an intruder has gained access to your home.

Having a HKC perimeter system in your home means the system can operate even when you are in the house. The system can also be utilised 24 hours a day whether the house is occupied or not.

Cost-effective and reliable, the HKC slimline sensor provides the security and reassurance you require in a top quality intruder alarm system.

All HKC products offer innovation and flexibility without compromise. In choosing any product in our range, you are assured of our total commitment to quality and reliability.

Thank you for considering our products in your security system.
